Pick-by-voice:

inconso and Vocollect join forces to expand their business with voice-directed logistics applications

Bad Nauheim, January 29, 2009

inconso AG is now an official solution provider for Vocollect, Inc. of Pittsburgh, PA, USA. Vocollect has accumulated vast experience in applying voice technologies to the logistics sector and has been serving customers around the world since 1991. Talkman T5, the latest

generation in its product line, is one of the smallest industrial-grade wearable computers ever built. The pocket-sized Bluetooth device can communicate wirelessly with other Bluetooth equipment such as headsets, printers and barcode readers, enhancing worker productivity and safety. It supports a total of 24 languages for international users.

As a leading provider of consulting services and software solutions for the logistics industry in Germany, inconso has developed and implemented countless solutions that incorporate voice-based components such as complete pick-by-voice systems. It has even implemented and started up solutions that are controlled from within SAP and integrated in the inconsoWMS product suite. Additional pick-by-voice solutions that combine inconso systems with Vocollect technologies are currently in preparation; others are already in the roll-out phase. inconso AG has certified employees trained in the use of Vocollect technologies.

Voice-directed logistics applications such as pick-by-voice offer many advantages. They free up workers' hands and eyes and eliminate the distractions of paper lists or computer displays. That improves worker safety dramatically. And, as past implementations have shown, pick-by-voice pays off very quickly through quality and efficiency improvements: The payback period is generally less than 12 months.
