AES 2.0 Integration for SAP

inconso AG and TIA innovations GmbH work together on IT solutions for customs processing

Bad Nauheim, April 23, 2009

TIA innovations GmbH and inconso AG are offering a joint completely SAP integrated version of the application software for AES 2.0, the new release of the only possible future electronic export process for customs management.

The countdown has already started for the July 1, 2009 deadline when German companies must process their goods exports through the "Automated Export System" (AES), the electronic export process for customs management. At the same time, Customs will change over the system to the Release AES 2.0. The new release offers the user additional functionality and extended interfaces, but it requires new and extended software solutions from the companies.

As of July, the automatic system replaces the export reporting on paper. As one of the first vendors of AES software certified for AES 2.0, TIA innovations GmbH has a version of the AES user software available. Working together with the leading German company for consulting and software solutions for logistics, the software is offered as a fully integrated into SAP solution. This integration allows the user to process all the communication with the customs offices completely within SAP covering from the export documents (ABD) through to the confirmation of the export from the customs office. The user is saved the hassle of having to exchange between different software products.

The software from TIA runs in the background and checks the plausibility of the entries in SAP and takes over the complete communication with the customs offices. This software can be both installed directly at the user location or used through a server center of TIA. A special highlight of the application in the server center is the „FairPrice“ invoicing model which allows each user to set its invoicing

type – either flatrate, position or transaction based. The invoicing form can be changed at any time online.

The partnership between TIA as the producer of the AES 2.0 certified software and inconso as the leading consulting and software company for logistics solutions in Germany offers the SAP user an attractive, streamlined alternative to the powerful SAP GTS. TIA has over 20 years of experience in the area of export business. inconso is active successfully in the SAP area with many years of experience and growth with the focus on integrated logistics processes from order processing through to transports.

Dr. Gerd Wintermeyer, member of the board at inconso AG, and Gerhard Stirner, managing director of TIA innovations GmbH, strive with this partnership to achieve a major enhancement of their respective offerings for performance based logistics solutions. The customers of both companies profit from this partnership. An increase in demand is expected: The first customer orders have already been received.
