## **Böllhoff and inconso „Joining together!“**

### **Specialist in the fastener and assembly systems migrates to the latest inconsoWMS X**

Bad Nauheim, November 5, 2009

In Bielefeld at the headquarters of the international family-led company group for fastener and assembly systems, Böllhoff Group operates a logistics center (LZ Nord) for the delivery of their subsidiaries and customers. Since the productive start in 2000, the center is

controlled with an inconsoWMS. In order to move the warehouse management to the latest technology and to be prepared for the future, inconso AG was commissioned with migrating the system to the latest inconsoWMS X using the inconso Windows Framework (IWF). This consisted also of the interfaces to the ERP system M3 5.2 from the American vendor Lawson, which has been in use since 2007 in the company division for fasteners and assembly technology and will be implemented in the division for fastener service supply. After the start in LZ Nord, the new inconsoWMS X will be rolled out to other sites in parallel with the company-wide rollout of the M3 system.

Böllhoff placed great value on the proven streamlined, flexible and uniform processes, efficient reporting based on the differentiated key performance indicator systems as well as the participation of their own workers. The fastener and assembly technology experts have built up vastly their own system know-how in the last years. Because of this, the project was completed together with teams from both companies. The inconso Windows Framework is the latest technology platform of inconsoWMS. With the migration, Böllhoff receives high user friendliness, improved display and handling as well as multi-lingual capabilities.
